

## Sisecam Flat Glass Showroom by Demirden Design

Nov 28, 2016 6:05 pm

[Demirden Design](#) recently completed the Sisecam Flat Glass Showroom, which invites visitors into an impressive journey, an exploration towards the nature of glass itself.

The Showroom is surrounded by an innovative outer shell proposing a new façade system for contemporary architecture. It's structure serves as a transparent screen that inspires and encourages creative applications of Sisecam Flat Glass's architectural glass products.

The Illuminated Wall creates the striking illusion of hundreds of glass samples flying in the air. It forms a large picture that lets the visitors experience the transparencies of various glass types under different light conditions.

The Safety and Security Glass cabin showcases the impact resistant glass types developed by SiseCam. Visitors can take part in a test, measuring the resistance of laminated glass. Right next to it, the Noise Control Glass cabin creates an entertaining experience.

The Isicam K Tunnel, surrounded by infrared lighting, aims to show the effects of heat and sun control on different types of glasses. The unit for the energy saving glass for low temperatures is designed to let the visitors feel the strength of isolation through tactile senses. It features 4 different types of glass that the visitors can touch and measure the difference in heat isolation.
