Bowls, One Liners
Tavs Jørgensen
Glass
H: 30-60cm
(11 1/4-23 1/4 in)
OKtavius, UK
www.oktavius.co.uk

Designer-maker Tavs Jørgensen's pioneering research into the utilization of digital technology informs the concept and aesthetic of his One Liner bowls. Using a Microscribe™ G2 digitizing arm, a point-and-click device for scanning physical objects, he recorded spontaneous loops that were fed directly into a computer. The 3D software translates these into two, two-dimensional representations. These were cut using computer numerical control (CNC) in stainless steel for the Z axis and MDF for the X-Y axis and assembled to create the kiln for the bowls. The vessels were formed using a process called 'free-fall slumping'. Under heat glass softens and gravity pulls it down in the centre, creating the body of the bowl; a rim is formed by the bowl taking on the shape of the stainless steel edge. "I want to use digital tools but utilize them in collaboration with the dexterity of the human hand," says Jørgensen.
